## Abstract

This paper reviews the bird skin collection housed in the Zoological Museum of Babeş-Bolyai University, Cluj-Napoca, Romania. The collection includes 925 specimens, belonging to 193 species from 53 families and 20 orders, collected between 1859 and 2021. Due to its historical background and the presence of rare species, it is considered to be one of most important ornithological collections in Eastern Europe. Such a collection can serve as a basis for valuable ornithological studies. Furthermore, a map representation with new distribution data for bird species is provided, which represents a source of information for the status of the avifauna of the Carpathian basin in the 19<sup>th</sup> and 20<sup>th</sup> centuries.

## Keywords

Aves, biodiversity, bird skin, museum, ornithology, ornithological collections

## Introduction

Museum collections are important primary data sources for addressing fundamental questions in morphology, systematics, biogeography and biodiversity conservation (Causey et al. 2004; Vágási et al. 2016; Bartoccioni 2017; Pap et al. 2017, 2019, 2020;

Osváth et al. 2018, 2020; Meineke et al. 2019). Collections generally comprise specimens from different time periods and areas; thus, well-labelled preserved specimens provide information on how the environment and species distribution has changed over extended time periods (Solow and Roberts 2006; MacLean et al. 2019; Gotelli et al. 2021). The importance of keeping specimens in collections and making them publicly available is increasing, particularly in the case of old collections, which cover long time periods (Roselaar 2003; Waeber et al. 2017; Mikula et al. 2018).

An important ornithological collection is held in the Zoological Museum of Babeş-Bolyai University, Cluj-Napoca, Romania (Fig. 1). The collection is unique in the region in many ways: it covers a long time span, it contains a variety of species, belonging to different families and orders, and it is composed of the work of several naturalists and employees of the museum. Bird skins account for approximately half of the total

**Figure 1.** Bird skin specimens from the ornithological collection of the Zoological Museum of Babeş-Bolyai University, Cluj-Napoca, Romania.

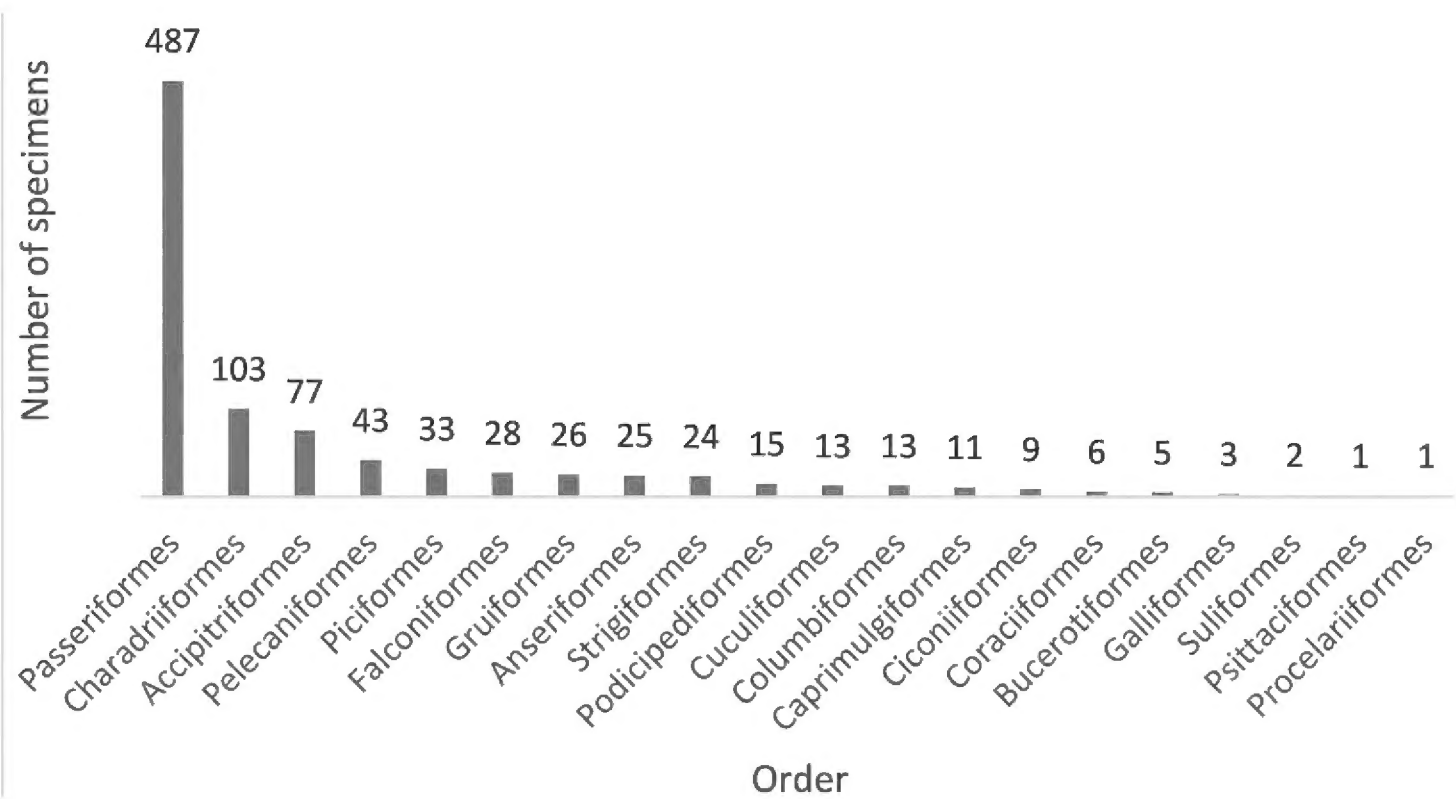

ornithological collection and they were only partially catalogued. Information about the collection had been published, particularly in the early stages of the museum’s history (e.g., Herman 1865, 1868, 1869; Apáthy 1910b, 1910a, 1911; Filipaşcu et al. 1965; Filipaşcu 1966), but the revision of the full collection had not been carried out and all specimen data had not been made public until now.

Hence, our aim was to systematically verify the species identification of the bird skin specimens in the Zoological Museum of Babeş-Bolyai University ornithological collection to provide a catalogue of these birds, including the following information: list of species, number of specimens per species, up to date taxonomic nomenclature, and collection data (date, location, collector).

Materials and methods

We examined each bird skin in the collection and the data cards documenting the identification, locality, date, sex and catalogue number. After this, we checked the species identification of specimens, and we determined the sex and age of birds, where possible. The scientific name and the taxonomy of birds was updated following Handbook of the Birds of the World and BirdLife International Taxonomic Checklist v. 5 (2020).

Some specimens lacked a data card but had old inventory numbers. Therefore, in order to maximise the information content of these specimens, we researched contemporary museum registers and early museum-related reports for data. Following identification, all available specimen data were entered into the updated digital catalogue of the bird skin collection. All collection locality information was georeferenced.

**Figure 2.** Total number of bird skin specimens per order represented in the ornithological collection of the Zoological Museum of Babeş-Bolyai University, Cluj-Napoca, Romania.

**Table 1.** Bird skin specimens held by the Zoological Museum of Babeş-Bolyai University, Romania, including their updated identification and scientific name, locality of collection, name of collector (sur-name, given name), date of collection, and sex and age of birds. The full catalogue of bird skin collection is provided in the Suppl. material 1: Table S1. A blank cell indicates no available data.

Collection summary

In total, we identified 925 specimens in the scientific bird skin collection housed in the Zoological Museum of Babeș-Bolyai University (Table 1; for detailed catalogue see Suppl. material 1: Table S1), belonging to 193 species from 53 families and 20 orders (Fig. 2). The orders with the most specimens were Passeriformes (487), Charadriiformes (103), Accipitriformes (77), Pelecaniformes (43), Piciformes (33), Falconiformes (28), and Gruiformes (26). Twelve orders (Anseriformes, Strigiformes, Podicipediformes, Columbiformes, Cuculiformes, Caprimulgiformes, Bucerotiformes, Ciconiiformes, Coraciiformes, Galliformes, Suliformes, Procelariiformes, and Psittaciformes) were represented by 25 or fewer specimens (Fig. 2).

The origins of 242 of 925 bird skin specimens are unknown, while three specimens were procured from different zoological gardens. 93.55% (639 out of 683) of specimens with known data were collected from Transylvania; only 43 specimens were collected outside this region, from different parts of Romania, Hungary, Ukraine, Bulgaria, Poland, and Norway (Fig. 3a, b). The collection includes eight exotic specimens:

**Figure 3. a** The geographical distribution of the bird skin collection in the Zoological Museum of Babeş-Bolyai University with the number of bird specimens collected from each region (NA=data not available) **b** localities of birds collected in Transylvania.

**Figure 4.** Temporal distribution of numbers of bird skin specimens added to the Zoological Museum of Babeş-Bolyai University Cluj-Napoca, Romania. (NA=218).

one with unknown data (*Melopsittacus undulatus*), three from Australia (*Eupsaltria australis*, *Lichenostomus fuscus*, *Pomatostomus superciliosus*), two from the USA (*Myiarchus cinerascens*, *Turdus migratorius*) one from Indonesia (*Pycnonotus cafer*), and one collected from Transylvania that is often kept as pet (*Estrilda troglodytes*) (Table 1; Suppl. material 1: Table S1).

The bird skin specimens in the collection housed in the Zoological Museum of Babeş-Bolyai University were collected between 1859 and 2021 (Fig. 4). However, we were unable to identify the year of collection/acquisition for 218 individuals. The oldest specimens were collected by János Xántus during his Californian expeditions

between 1857–1859, and donated to the museum in 1959 (Frivaldszky 1865). The oldest native species in the collection with known data were collected by Ottó Herman in 1867. Most of the specimens were collected between 1909 and 1913 by Lajos Führer (460 specimens), followed by Ferencz Vincze (72 specimens) between 1970 and 1973. In total, the bird skin collection has had 26 different contributors (Table 1; Suppl. material 1: Table S1).

The collection also includes rarities and important avifaunistic data, for example one specimen of the Cinereous Vulture *Aegypius monachus*, two specimens of the Eastern Imperial Eagle *Aquila heliaca*, and one Lesser Kestrel *Falco naumanni*, all collected between 1903 and 1907 from Transylvania (Table 1). The full catalogue of bird skin collection is provided in the Suppl. material 1: Table S1.

## Acknowledgements

We are very thankful to many students from the Faculty of Biology and Geology of Babeş-Bolyai University and to the volunteers from the Zoological Museum of Babeş-Bolyai University, particularly Orsolya Kovács, Mátyás Sztojka, Helga Tóth-Pál, and Gergő Varga. We would also like to thank Cosmin-Dragomir David and Hunor Prázsmári for their help reorganizing the bird skin collection and entering the data into the primary database. We are grateful to Szilárd Daróczi from Milvus Group for his help identifying some problematic specimens. We thank the editor and reviewers for their constructive comments and valuable suggestions, which have helped improve the quality of the paper.

## **Supplementary material I**

### **The catalogue of bird skin specimens held by the Zoological Museum of Babeş-Bolyai University, Cluj-Napoca, Romania**

Authors: Gergely Osváth, Edgár Papp, Zoltán Benkő, Zsolt Kovács

Data type: xlsx. file.

Explanation note: The catalogue of bird skin specimens held by the Zoological Museum of Babeş-Bolyai University, Cluj-Napoca, Romania, including their new and old inventory numbers, updated species identification and scientific name, locality, country and region of collection, gps coordinates, name of collector, date of collection, sex and age of birds.
